

125KHz Proximity to Mifare Plus® Migration Path

SOLUTION FACT SHEET

For those that have an access control system using 125KHz (HID Compatible) Card Readers, a large card population and want to upgrade to a Mifare Plus® (AES) Secure Sector Smart Card seamlessly.

BQT has the SOLUTION by replacing your current readers with BQT Solutions migration readers in three easy, seamless steps.

Step 1: The BQT Multi-technology Smart Card Readers are installed, allowing access to your current card population, in many cases users will not be aware of any change and the security level at this stage will remain unchanged.

Step 2: The client has the flexibility to replace the card population in a planned, cost effective and systematic manner. During this stage users will receive their new credential (card) and the BQT Multi-technology readers will read both credentials.

Step 3: Once all the new Mifare Plus® credentials are issued, readers are reconfigured to accept only the Mifare Plus® credentials . The migration is complete and the Security level of the ACS to high security is now complete.
