

RESIDENTIAL APPLICATIONS

YNOTLOC - DOOR LOCK

CASE STUDIES | D01

OVERVIEW

With access control finding its way out of commercial and into residential installations, the YNOTLOC – Door products offer users a range of secure solutions. When the owner of this home commissioned a unique copper door to be made as the main entrance point, a suitable lock needed to be found. Two YD25 fail secure locks were chosen and mortises were cut into the door frame for the locks to be installed. Corresponding mortises were cut in the door to fit the strike plates ensuring no locking hardware could be seen when the door was closed and the look of the door was not compromised. The locks were powered by a battery backup power supply and connected to a weather proof keypad so the owner no longer needed to carry keys.

KEY BENEFITS

- Streamlined design to fit into narrow doors and frames
- Versatile installation – vertical or horizontal orientation rebated into or surface mounted onto doors and frames
- Key override option available offering both electric and manual operation of the lock
- Multiple voltage input
- Full monitoring – door, bolt and key position monitors are standard
- High physical strength of 1000 – 2000kg holding force
- Current reduction to reduce heating and power loss
- Stainless steel components ensure a high quality finish
